## SYNTAX USED IN KEYMAP SCRIPTING

`\\`

Use to represent `\`.

`\\(Decimal Value)`

Use to represent **a character decimal value**.

(e.g. `\65 = 0x41 = A`)

`\065`, `\0100` (Don't put zero)

`//(Comment String)`

Use to represent **Comment**.

## FAQ:

**Q:** I cannot add or remove the keyboard file in Windows Vista. How can I do?

**A:** It is because UAC (User Account Control) blocking Keymagic's operations. Please run Keymagic as an Administrator privilege or turn off UAC.
